

ULTRAHEAT®T330 ULTRACOLD®T330

Technical description

32 22 101 001 c Date: 14.02.2019 Landis+Gyr GmbH Outstanding features 2/26

Outstanding features

Meter for measurement of flow and energy in a heat or cold circuit with water using the ultrasonic principle.

Important properties are:

- Non-wearing due to non-moving parts
- Compact, space-saving design
- Robust all-metal measuring section
- Exceptional robust DuraSurface™
- Easy installation and read out
- Fast and intelligent temperature measuring interval
- Large, easily readable display
- Flow measurement with maximum values
- 2 set days per month for 24 months (parameterizable)
- Battery lifetime up to 11 years
- Integrated communication for remote readout or system connection
- Self-diagnosis

General notes 4/26

1 General notes

The meter is used as a meter for heating or cooling consumption measurement in systems with water.

The meter consists of a volume measurement unit, two fixed temperature sensors and an electronic unit that calculates the energy consumption from the volume and temperature difference.

Other available documents

- Operating and Installation Instructions T330
- Respective module operating and installation instruction
- Illustrated catalogue
- Datasheet

Additional information is available on request.

Safety information 5/26

2 Safety information

The meter may only be used in building service engineering systems and only for the applications described.

The local regulations (installation etc.) must be adhered to.

The operating conditions according to the type plate must be complied with during use. Non-compliance can result in hazardous situations and the expiry of all claims arising from liability for defects as well as liability based on any expressly granted guarantees.

The meter is only suitable for circulating water in heating systems.

The meter is not suitable for drinking water.

Be aware of sharp edges on thread and measuring tube.

Requirements for circulating water (CEN/TR 16911: 2016).

Do not lift the meter by the electronic unit or by the adapter plate.

Only personnel, trained in the installation and operation of meters in heating and cooling systems, may install and remove the meter.

Only install or remove the meter when the pipes are pressure-

After installing the meter, check the leak-tightness of the system.

Warranty and calibration validity will lapse if the calibration relevant security seal is broken.

Only clean the meter from outside with a soft, lightly wetted cloth. Do not use any spirit or cleaning solvent.

As far as disposal is concerned, the meter is a waste electronic appliance in the sense of European Directive 2012/19/EU (WEEE) and it must not be disposed of as domestic waste. The relevant national, legal regulations must be observed as the appliance must be disposed of via the channels provided for this purpose. The local and currently valid legislation must be observed.

The meter contains lithium batteries. Do not dispose of the meter and the batteries with domestic waste. Observe the local stipulations and laws on disposal.

Safety information 6/26

You can return the lithium batteries to the manufacturer for appropriate disposal following use. When shipping please observe legal regulations, in particular, those governing the labelling and packaging of hazardous goods.

Do not open the batteries. Do not bring batteries into contact with water or expose to temperatures above 80 °C.

The meter does not have any lightning protection. Ensure lightning protection by the house installation.

Installation 10/26

4 Installation

To install the meter, proceed as follows:

Determine the place of installation in line with the inscription on the meter.

Note: For a **heat meter** the mounting place of the cold side is equivalent to return and the mounting place hot side is equivalent to flow.

Note: For a **cooling meter** the mounting place of the hot side is equivalent to return — and the mounting place of the cold side is equivalent to flow —.

- Observe the dimensions of the meter and check whether there is enough space available.
- Rinse the system thoroughly before installing the meter.
- Fit the meter vertically or horizontally between two slide valves so that the arrow on the housing and the flow direction match. Also observe the installation situations and the following examples of installation.
- Fit the temperature sensors in the same circuit as the meter. Observe in addition the admixtures.
- Seal the temperature sensor and the fittings to protect against manipulation.
- If you install the meter for cooling metering, follow the respective notes.

Recommendation: If you are installing several meters, the same installation conditions must be consistent for all meters.

Installation notes

Note: Observe the local valid installation instructions mounting the meter.

Inlet or outlet sections are not necessary. If you install the meter in the common return of two circuits, determine a place of installation with a minimum distance of $10 \times DN$ from the T-piece. This distance ensures a good thorough mixing of the different water temperatures. You can install the temperature sensors in T-pieces, ball valves, directly immersed or in pockets depending on the version. The temperature sensor ends must reach to at least the middle of the pipe cross section.

Note: Protect the meter against damage through mechanical shocks or vibrations at the place of installation.

Note: Ensure the electronic unit is protected against any ingress of water.

Installation 11/26

Examples of installation

You can install the meter in any position e.g. vertically or horizontally. In order to avoid accumulation of air and disruption in operation, fit the meter in a vertical installation position and not in the uppermost area of a pipeline.

* This position is not permitted for cold meters and in cases where moisture can enter the electronic unit due to condensation (e.g. during an interruption in the summer).

Fig. 4: Mounting position

Fig. 5: Example for installation

Fig. 6: Installation for circulation with admixing; placement of temperature sensors

Fig. 7: Installation for circulation with throttling configuration (flow sensor in flow direction before control valve / differential pressure regulating valve)

Installation 12/26

Installation notes for sensor adapter set (sensors directly immersed)

A mounting set is included for meters with 5.2×45 mm temperature sensor. With this you can fit the temperature sensor directly immersed into an insert or a ball valve for example.

- 1. Install with O-ring at the point of installation with the fit-up aid/pen provided.
- 2. Place both halves of the plastic bolting round the 3 notches of the temperature sensor.
- 3. Press the bolting together and screw the bolting hand tight into the point of installation until it comes to a stop (tightening torque 3 ... 5 Nm).

Fig. 8: Mounting adapter set

4.1 Installation for cooling metering

Observe the following installation instructions to avoid condensation:

- Mount the cooling meter so that the black covering on the measuring section points sideward or downwards.
- Mount the electronic unit separated from the volume measuring unit e. g. on the wall.
- Form with the connected cables a loop downwards.
- Mount the protection pocket so that the temperature sensor is oriented vertically downwards or horizontally.
- Mount the temperature sensor horizontally or vertically in the pipe from below.

Fig. 9: Recommended installation orientation for cooling measuring

6.1 Displaying current meter status

The meter displays the current meter status in kWh, MWh, MJ or GJ.

Note: In order to prevent reading errors, the decimal places of the values displayed are marked with a frame.

Note: Calibrated values can be recognized by an additionally displayed star symbol.

Note: Both display range and data displayed can differ from the description depending on the appliance parameterization. Certain button functions can also be blocked.

General / Communication "LOOP 3"

Other "LOOP 4"

6.2 Monthly values

The meter stores the following values for 24 months on the monthly set day

- Missing time
- Volume
- Energy

and maxima with date stamp for

- Flow
- Power
- Temperature hot side
- Temperature cold side

The monthly values can be read via optical interface.

Note: Central European Time (CET) applies as the standard time. During summer time the storage takes place at the corresponding times.

7 Resolution of the display

Nominal flow rate in m³/h

8 Power supply

The meter is according to the configuration equipped with 1-3 lithium batteries.

Options:

- 6 years battery
- 11 years battery

Communication 19/26

9 Communication

Electronic unit interfaces

The meter is equipped with an optical interface in accordance with EN 62056-21:2002 as standard.

Note: You can find further information in their respective documentation.

9.1 M-Bus

If the meter is equipped with the option M-Bus, it is supplied with a 2-wire cable which you can extend by fitting a junction box.

Standard EN 13757-2 and -3 Reading interval >1 min @ 2400 baud

Note: Frequent turning on and off the M-Bus voltage can lead to reduction of battery lifetime.

9.2 Pulse output

The pulse output permits the transmission of energy or volume equivalent pulses.

Two channels are available. Their functions can be parameterized with the service software or can be adapted in the "Para menu" of the meter.

Available are standard pulses or high-definition pulses.

The pulse duration is identical for channel 1 and channel 2.

Cable labelling passive pulse output

Cable 1.5 m; 4-wired, LL84201 4xAWG28 /

0.2 mm²

Cable diameter 4 mm
Output type open drain
Voltage max. 30 V
Current max. 30 mA

Dielectric strength 500 V_{eff} against ground Classification OB/OC (acc. to EN 1434-2)

ON/OFF resistance $<74 \Omega / 6 M\Omega$

Output connection

Communication 20/26

9.3 Wireless M-Bus

The wireless M-Bus function enables the meter to communicate with a stationary unit (e. g. radio concentrator, smartphone with radio adapter) using 868 MHz radio frequency (unlicensed).

The function supports the OMS¹⁾-compliant data transfer.

Standard Open Metering System Specification

(Issue 3.0.1); EN 13757-4

Frequency 868.95 MHz (min. 868.90 MHz to

max. 869.00 MHz)

Transmission power Min. 3.16 mW (5 dBm) to max. 25 mW (13.9 dBm)

Range 2)

- Free field Up to max. 400 m Power supply max. 3 batteries type AA

Sending interval

- Mobile data reading Acc. to configuration 20 – 34 sec

Stationary data reading 15 min

- User defined data reading Acc. to telegram length 12 – 900 sec

1) Open Metering System

2) May vary depending on terrain and building structure

Predefined data telegrams

Note: Please tell us if encryption needs to be set at factory. The unique encryption key for every meter will be created and you will get a file by email (meter number <> encryption key).

Data telegram F000 – stationary radio (sending interval 15 min)

Following data are available by default for data reading:

- Current energy
- Current volume
- Current flowrate
- Current power
- Current temperature hot side
- Current temperature cold side

- Current timestamp (type I)

Communication 21/26

Data telegram F001 – mobile data reading (sending interval 20 sec, battery lifetime 6 years)

Following data are available by default for data reading:

- Current energy
- Current volume
- Energy: previous month on reference date
- Volume: previous month on reference date
- Monthly reference date
- Energy: previous year on reference date
- Annual set date
- Error (manufacturer specific)
- Current timestamp (type I)

Data telegram F002 – mobile data reading (sending interval 34 sec, battery lifetime 11 years)

Following data are available by default for data reading:

- Current energy
- Energy: previous month on set date
- Monthly reference date
- Energy: previous year on reference date
- Annual reference date
- Error (manufacturer specific)
- Current timestamp (type I)

Error codes 22/26

10 Error codes

The meter continuously runs a self-diagnosis and can thus recognize and display various installation or error messages.

Error code	Error	Service guidelines
FL nEG	Incorrect flow direction	Check flow or installation direction; correct if necessary
	if necessary, in	exchange with:
DIFF nEG	Negative temperature dif- ference	Check installation point of the tem- perature sensors; exchange if nec- essary
	if necessary, in	exchange with:
F0	No flow can be measured	Air in the measurement unit/pipe; bleed air from line (delivery condition)
F1	Interruption in the hot side temperature sensor	Inform service department
F2	Interruption in the cold side temperature sensor	Inform service department
F3	Electronics for temperature evaluation defective	Inform service department
F4	Problem with the power supply; Battery flat	Inform service department
F5	Short-circuit hot side temperature sensor	Inform service department
F6	Short-circuit cold side temperature sensor	Inform service department
F7	Fault in internal memory holding	Inform service department
F8	F1, F2, F3, F5 or F6 for longer than 8 hours, recognition of attempts to manipulate. No further measurements are carried out.	Measure dependent on error code. Error message F8 must be reset by service department.
F9	Fault in the electronics	Inform service department
	N (D ()	

Note: Reset the message F8 in the parameterization mode manually or with the service software. All other error messages are deleted automatically once the error has been rectified.

Display: MWh with 3 decimal places	В
Display: MJ	С
Display: GJ with 3 decimal places	D

^{*)} Additional ordering information needed (see page 23)

12 Additional ordering information for wM-Bus

Note: The battery life time always depends on the meter configuration (measuring interval) and on the data telegram length, encryption (with / without) and sending interval (mobile / stationary)!

All these configurations can be changed with the service software!

Note: Data in the radio module is updated every 15 minutes independent of the sending interval.

Necessary additional ordering information's:

- You must decide for "stationary radio (sending interval 15 min.)" or "mobile data reading (sending interval 20 34 sec.)".
- Please tell us if encryption needs to be set at factory.
- The unique encryption key for every meter will be created and you will get a file by electronic delivery note (meter number <> encryption key).

1. Stationary radio:

Ordering example battery life 6 years, data telegram F000, sending interval 15 min.:

UH30-XXXX-XXXX-X-XX-EA-XXX + F000 + encryption

E = Wireless M-Bus function stationary

A = Battery lifetime **6 years**

F000 = Stationary radio

Encryption (AES 128) = Yes / No

Ordering example battery life 11 years, data telegram F000, sending interval 15 min.:

UH30-XXXX-XXXX-X-XX-EF-XXX + F000 + encryption

E = Wireless M-Bus function stationary

F = Battery lifetime **11 years** F000 = stationary radio

Encryption (AES 128) = Yes / No

2. Mobile data reading "walk by"

Ordering example battery life 6 years, data telegram F001, sending interval 20 sec.:

UH30-XXXX-XXXX-X-XX-FA-XXX + F001+ encryption

F = Wireless M-Bus function mobile

A = Battery lifetime **6 years**

F001 = Mobile data reading

Encryption (AES 128) = Yes / No

Ordering example battery life 11 years, data telegram F002, sending interval 34 sec.:

UH30-XXXX-XXXX-X-XX-**FF**-XXX + F002+ encryption

F = Wireless M-Bus function mobile

F = Battery lifetime **11 years**

F002 = Mobile data reading

Encryption (AES 128) = Yes / No

Pressure loss 25/26

13 Pressure loss

Nominal flowrate qp	Overall length	Connection	Pressure loss at qp	Kv-Factor at Δp 1 bar	Graph in diagram
m³/h	mm	G / DN	mbar	m³/h	
0.6	110, 190	$G^{3}/_{4}$	150	1.5	Α
1.5	130, 190	G1	160	3.8	В
1.5	110	G ³ / ₄	150	3.9	С
2.5	190	G1	210	5.3	D
2.5	130	G1	200	5.6	Е

The indicated pressure loss of a flow sensor is at nominal flowrate qp. With the Kv-Factor, which defines the flow rate at a pressure loss of 1 bar, the pressure loss at any given flow rate can be calculated:

$$\Delta p = pressure\ loss\ in\ bar$$

$$\Delta p = 1bar imes \left(\frac{Q}{K_v}\right)^2 \qquad \qquad Q = flowrate\ in\ m^3/h$$

$$K_v = K_v - Factor\ at\ \Delta p = 1\ bar$$

Alternatively, the value can be taken from the diagram.
